

MANUFACTURING TEST

From design to full production readiness – Digi designs, builds and deploys manufacturing test solutions for your wireless products

Digi's Wireless Design Services test engineers work with the product design team to incorporate design for manufacturing into your product. As the design is being implemented and prototypes are being built, test engineering is designing and

building the automated test capabilities to test the Alpha, Beta and production units so you can be assured that each unit coming off of the production line is made in accordance to your specifications.

CAPABILITIES:

- Project planning
- Concept development
- Proof of concept
- Manufacturing test plan
- Instrument selection
- Operator ergonomics
- Design for testability
- Design for manufacturability
- Test executive development
- Functional test development
- Test system deployment
- Complete product documentation
- Contract manufacturing liaison
- Manufacturing test analysis

Digi is the leading expert in Wireless Design Services for complete product development from concept to manufacturing.
